

APAS SUPPORTS FARMERS RIGHT TO REPAIR EQUIPMENT

November 28, 2022 (Regina, SK) – The Agricultural Producers Association of Saskatchewan (APAS) reiterates its steadfast support for Saskatchewan farmers’ right-to-repair their equipment. Competition is essential in agriculture input markets, there is limited competition however for repairs. Farmers own equipment but lack the tools to make rapid repairs when systems are protected behind copyright.

“Most equipment manufacturers build in software protections that restrict a farmers ability to perform basic diagnostics, maintenance or repair of their own equipment,” noted Ian Boxall, APAS President. “APAS members believe that when you own the equipment, you also should have the right to repair it in a manner that makes sense for your farm.”

House of Commons Bill C-244 *An Act to amend the Copyright Act* was introduced in February 2022 and passed Second Reading on October 5, 2022. A key principle in the Bill is to enable farmers access to the software and computer programs being used in their equipment.

“We respect the manufacturers right to protect their intellectual property and the Copyright Act provides them protection from anything being copied or distributed,” noted Boxall. “At the same time, we want farmers to be able to find the most cost-effective solution when they need to repair their equipment and we support a market-based approach.”

“Access to professional repair can be difficult during critical times, and with the increased digitization of farm machinery, a new complexity has been added,” stated Boxall. “Farmers have for years used their own grit and know-how to do these repairs. However, with digital locks, inaccessible diagnostics tools, and part shortages the ability of producers to do this work is limited.”

Almost 20 States in the United States and numerous European countries are developing legislation to address this issue. “There is more work to be done and it will be in everyone’s interests to ensure clarity and understanding on this issue before these amendments are finalized,” stated Boxall.

APAS President Ian Boxall speaks before House of Commons Standing Committee on Industry and Technology

December 6, 2022 (Ottawa, ON) – The Agricultural Producers Association of Saskatchewan (APAS) continued its support for farmers and their right to repair farm machinery on Monday. APAS President Ian Boxall spoke before the House of Commons Standing Committee on Industry and Technology reiterating the importance of the right to repair our farm machinery.

“Saskatchewan has the largest farms, and the shortest growing season in the country,” Boxall said. “Each day we lose in the field can affect the quality, and quantity of the crops that we grow. If we can’t get our machinery fixed and running, it costs both farmers and consumers. “

House of Commons Bill C-244 An Act to amend the Copyright Act was introduced in February 2022 and passed the Second reading on October 5th, 2022. A key principle in the Bill is to enable farmers access to the software and computer programs being used in their equipment.

“Our machinery has become more technically advanced in the last few decades, and has made us world leaders in sustainability, growing the most sustainable food, fuel, and fibre. We are thirty years ahead of everyone else,” Boxall added. “This however means that we have very high machinery costs, and we need to be able to fix our own machinery so we can control our costs and get back to work.”

This concludes the study of the bill at committee, and APAS will be making a submission in the new year to the government to further clarify and state its support for farmers’ right to repair their machinery.
